Note Photoshop's Layer Comps dialog box is a part of Photoshop's own native Windows menu system; it's accessed by pressing the keyboard shortcut N. Also, as of Photoshop CS6 and Photoshop Elements 12, you can use the Photoshop Map mode to modify images in 3-D (3-D). Figure 1-2. Layers in Photoshop let you manipulate images in a layer-by-layer, window-by-window manner. To create a new layer, click the New Layer button at the bottom of the Layers panel (shown here in the image on the right). You can then move, resize, and reposition the layer. When you've got a new layer, you can add more (see the box on the next page). The Layers panel also helps when you want to turn off a layer so that you can do other things with a file without distorting what's on the layer.

Effects In Photoshop, filters are graphical overlays, which can be combined in a folder. They can be used in various ways, such as to darken, lighten, adjust colors, change the shapes of objects, or erase a part of an image. They are commonly used to create special effects in images. Shape Tools The Shape tool allows you to create graphics objects, such as circles and squares, including different sizes, shapes, and colors. You can also alter the edges of these shapes in various ways. Artboards Another powerful tool in Photoshop is the Artboard. You can use this tool to create any image you want. To start, select the Artboard tool from the Toolbox. Next, click and drag in any direction to create an image. You can then manipulate this new image by using the tools and features explained above. You can change the background color of the artboard and its surroundings by selecting the Artboard Fill and Artboard Stroke properties. You can also add artboards to a Photoshop group, which will allow you to access the same group of artboards later. Photoshop Resize You can resize a Photoshop image by using the Edit > Image Size menu. You can change the width and height of the image, and save it into various formats. A: Painting is not actually creating an image. You're just altering the pixels of an image. The only way you can create an image is to use a program like PS. When you use the tools like the Brush tool and the Paint Bucket, and you fill an area with color, it's actually filling in that area with a color and not creating a new image. When you've created a new image, you'll know it because the area where you painted will be what you've created. Brushes Effects Mask Clone Stamp A: As a beginner, you must know what the terms mean: A brush is a way of painting a color onto the picture (see: what is a paint bucket?) A "filter" is a way to modify an image's appearance: the way it looks, the colors, the pattern, etc. Effects are a collection of filters you use to "paint" your image. You can use even more than one filter in a single effect. You can use them to make your picture "fresher", "blue", "blurry", etc. A mask

1. Field of the Invention The present invention relates to the milling of hard materials and more particularly to milling equipment with a cutting head, which is adjustable in the radial and axial direction, which is provided with a replaceable or serviceable milling cutter. 2. Description of the Prior Art In prior art milling equipment with replaceable milling tools as well as in the majority of milling equipment sold commercially, the milling cutter is provided on a carrier, which is mounted on a rotatable or non-rotatable milling spindle. In order to ensure the proper positioning of the milling cutter on the spindle, on the one hand, and to provide for the proper protection of the milling cutter, on the other hand, a particular method is used. For positioning of the milling cutter, the carrier of the milling cutter is provided with an angular dimension which must be adjusted to the desired angular position of the milling cutter. Protection of the milling cutter is achieved by the insertion of an impact protection of a hard material in a housing (reinforcement). The rotatability of the milling spindle is provided in that the spindle itself is rotated while in a certain angular position the milling cutter is inserted and is rotated by the milling spindle. A milling cutter, which is provided with a milling cutter (tooth), which is arranged such that it can be replaced, has been proposed previously. One example of the arrangement of the milling cutter in which the milling cutter (tooth) can be replaced is given in DE 2933267 A1. This DE patent consists essentially of a milling cutter which is mounted on a milling spindle, which is firmly and rotatably held in a spindle housing. Also provided is a housing in which the milling spindle is securely held and which projects radially through this housing and bears the milling cutter such that it projects at its end remote from the spindle housing. The milling cutter is formed by a milling body which is exposed to a cutting impact and is supported and locked in this radial position on the end of the milling spindle. The milling cutter consists of a cutting material, which is made of cemented carbide and which has a micro hardness of at least 2,000 HV, in this embodiment up to 63 HV. This prior art DE patent has the following configuration, as a result of which the milling cutter is immov
