As students develop interest and skills in mathematics, they will seek to become proficient and ultimately become prepared for successful academic life. In all states, a great number of public and private elementary and secondary schools offer courses in the basic mathematics, ranging from kindergarten through high school. There are two main groups of teachers of mathematics: (a) those who specialize in teaching mathematics in elementary and secondary schools and (b) those who specialize in teaching mathematics in the university. The former group of teachers is usually called school mathematics. The latter group is usually called university mathematics. ## K-12 SCHOOL MATHEMATICS In elementary school, mathematics is taught in the form of counting, enumerating, sorting, and comparing. Math consists of the process of counting objects, for example, counting the number of squares on a piece of paper or counting the number of letters in a word. After counting, students are taught to estimate or make rough calculations about amounts of money, objects, or time. Another type of counting is counting by counting, for example, counting the number of steps on a staircase. Students are taught that there are many different types of counting. There are numbers that are counted. There are time intervals that are counted. There are objects that are counted. These are called abstract numbers. Other types of counting are counting with objects. They are called concrete numbers. Students learn counting with objects. There are arithmetic counting with numbers, money counting, object counting, and counting with fractions and decimals. Students are taught to count from one to ten. They are taught to count from one to twenty and then to count from one to one hundred. They are also taught to count to a hundred. After learning to count to one hundred, students can learn other types of counting. At this point, they can count to a thousand, to ten thousand, to hundred thousand, to one million, and to ten million. In addition, students are taught how to count by tenths and by hundredths. In summary, students are taught how to count by tenths and by hundredths. They are taught how to 82157476af
